

TECHABILITY

YOUR PROBLEM

- X We don't know if our client information is secure
- X Our staff don't understand cyber security risks
- X Our staff use their phones to access client data
- X We don't know if our IT person or external provider has implemented proper security protocols

HOW CAN TECHABILITY HELP?

- ✓ We can review your systems, data and controls to identify risks and help you implement simple processes including automated software updates, regular back-ups and multi-factor authentication.
- ✓ If you would like more robust cyber security protection, we can conduct a formal audit of your business against the Essential 8 framework and advise on strategies and controls to increase your security.
- ✓ We can also provide policies and training to ensure your staff are able to appropriately safeguard your business and client information.

Cyber Security

WHAT OUR CLIENTS SAY

“Following the recent wave of ransomware attacks we knew we needed to increase the levels of our cyber security and contacted Anita. As someone we have trusted for many years, we knew Anita and her team would give us straight, easy-to-follow advice, and ways to make improvements. Following an audit of our protection software, TechAbility was able to fortify our data and show us how to be cyber safe. We know technology is constantly changing and risks will always arise, but we know with Anita in our corner we will always be protected.”
